

## Ensuring Structural Integrity FOR Lighting

Your assets are not as reliable as you may have thought, or maybe you've already had a lighting failure. Without a detailed inspection, it's hard to know when the next problem might arise. Don't wait for a catastrophic event — ensure safety by taking corrective action now. Exo has inspected tens of thousands of assets and implemented long-term maintenance plans designed to help prevent further failures.

Exo's inspections help you find manufacturing defects, aging or fatigue related issues, as well as corrosion and other damaging effects on aging structures. Our comprehensive analysis determines if one of your assets needs to be remediated or replaced.

While others may do lighting inspections, only Exo offers industry-leading precision and expertise with the latest technological advancements, combined with our **Ex-Tend™** strategic, full lifecycle approach to asset sustainability that maximizes your investment, prevents accidents, and demonstrates results that show up clearly on the bottom line.

### Exo Lighting Industry Expertise:

#### Athletic Field Lighting

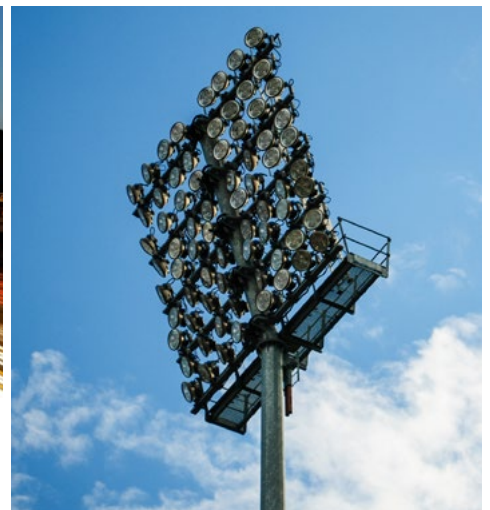

- Independent school districts
- Public/private universities
- Parks and recreation

#### Commercial Lighting

- Retailers
- Commercial real estate
- Property management

#### Transportation Lighting

- Municipalities
- Public Works
- DOT
- Infrastructure

ENSURING STRUCTURAL INTEGRITY

# Our Approach

Exo brings to every service our **Ex-Tend™** data-driven, full lifecycle management approach to empower you to proactively care for and increase the lifespan of your assets. We inspect every structural component including the foundation, base plate, welds, pole shaft, and fixture mounts. Beyond asking “is it working”, we focus on the structure as a whole and consider its design and structural soundness for both the short and long term. Our technical team then reviews the data to determine the best course of action moving forward.

Our collaborative approach helps building managers, maintenance directors and superintendents avoid the costly “replace all” panic button. We strategically guide decision makers toward budget-friendly repair versus replace solutions.

## Exo Lighting Inspections Include:

- Magnetic particle inspection
- Ultrasonic testing
- Dye-penetrant testing
- Visual inspection
- Resistograph inspection
- Coating inspection
- Corrosion assessment
- Engineering/design review
- Online portal and data access

## Exo Lighting Reports Provide:

- Non-biased, expert results
- Actionable data to execute maintenance program
- Recommendations on repair/replace protocols
- High quality images
- Quantifiable grade assigned to each structure

# Select Valued Clients

**“Exo is our go to company for any lighting structure related issues. Their responsiveness and breadth of experience is second to none in our industry.”**

- Rodney Hawthorne, Techline Sports Lighting

Contact Exo to fix your immediate lighting issues and get a sound maintenance plan for the future.
