

Ensuring Structural Integrity

THROUGH

Quality Assurance

KNOWING WHAT CAN GO WRONG – AND EXACTLY HOW TO FIND AND CORRECT IT

From steel to concrete to fiberglass composite, we've seen just about everything that can go wrong with structures. Our expertise means we can spot issues before they cause problems and help you correct them right away.

Prior to selecting your supplier, you need to know they have the equipment, personnel and processes to handle the project and meet your precise requirements. With over 100 years of combined professional experience in inspection, evaluation, remediation and manufacturing, Exo has the expertise you need to assure your assets are manufactured to the highest quality. Whether it's wood, steel or fiberglass composite, we know that if you build it right the first time, the asset becomes more reliable.

Industries Served:

- Power Delivery
- Conventional Generation
- Renewable Generation
- Lighting
- Telecommunications
- Oil & Gas

ENSURING STRUCTURAL INTEGRITY

Quality Assurance

Everyone demands quality. However, operationalizing a quality standards program throughout your organization is a challenge, especially when you rely on outside suppliers. Exo has expertise in establishing protocols that infuse quality into every asset you create, buy, or manage. Whether from project inception or taking corrective action post-launch, we know the questions to ask, the specifications to set, and the practices to develop that ensure your high quality standards are met.

A “maintain vs. replace” mentality is reflected in everything we do. Whether you choose one of our services, or allow us to deploy comprehensive Asset Program Management, we can help you. Our Ex-Tend strategic, full lifecycle approach to asset sustainability will maximize your investment, prevent accidents and demonstrate results that show up clearly on the bottom line.

Build it right the first time, and your assets become more reliable.

In-Facility Quality Control

Exo's team verifies the quality of your structures during all stages of fabrication with a thorough in-plant quality control. We are your eyes and ears during fabrication and provide you with detailed updates during the entire process. We not only monitor the fabrication process, but we can sample the product and perform a series of non-destructive tests to ensure there are no critical defects in the structures.

During fabrication, Exo places highly qualified technical personnel in the manufacturing facility to keep close watch on your structures. From welding to galvanizing, quality assurance to production, we ensure your project is delivered ready to assemble. Field issues are minimized or eliminated when Exo monitors the fabrication process for your project.

Exo In-Facility Quality Control Services Offered:

- Code, standards and specification compliance
- Supplier assessment
- Supplier process controls
- Daily activity reporting
- Non-conformance reporting and tracking
- In-process sampling
- Post fabrication inspection and testing
- Asset defect identification

Exo Quality Assurance Services May Include:

- RFI/RFP consultation
- Project monitoring and expediting
- Specification development
