

Ensuring Structural Integrity

THROUGH

Field Service & Repair

COMBINING FIELD EXPERIENCE WITH
ENGINEERING EXPERTISE

When structural assets begin to inevitably deteriorate, they become both a financial, and potentially, a legal risk to your organization. As the pressures of penalties, lost revenue, and customer dissatisfaction mount, you need a team ready to immediately service and repair these assets to keep them structurally reliable.

With over 100 years of combined professional experience in inspection, evaluation, remediation, and manufacturing, Exo's field service crews have expertise in poles, towers, and infrastructure assets of all types. Coupled with unmatched engineering expertise, our time-tested capabilities ensure that we'll deliver the best possible solution, every time.

A "maintain vs. replace" mentality is reflected in everything we do. Whether you choose one of our services, or allow us to deploy comprehensive Asset Program Management, we can help you. Our Ex-Tend strategic, full lifecycle approach to asset sustainability will maximize your investment, prevent accidents and demonstrate results that show up clearly on the bottom line.

Industries Served:

- Power Delivery
- Conventional Generation
- Renewable Generation
- Lighting
- Telecommunications
- Oil & Gas

ENSURING STRUCTURAL INTEGRITY

Field Service & Repair

Combining Field Experience With Engineering Expertise

Time is not a luxury, we get it. When assets are failing, you urgently need both speed and efficiency in one site visit. This is why Exo's field service & repair crews work in close collaboration with our inspection teams, and our engineers, to make sure your assets are inspected and remediated all at once – no redundancy, no prolonged repair schedules.

Exo clients benefit from our turnkey remediation solution that includes engineering, design, fabrication, and execution – each adhering to our premier quality standards. While some firms may weld and others may fix concrete, or patch fiberglass, Exo has this expertise and more with a full range of field repair, upgrade, and strengthening services options under one roof.

Another Exo difference is our ability to repair in-service materials. All field welding is performed in compliance with appropriate AWS (American Welding Society) standards and all field strengthening programs are implemented to ensure that structures meet the latest design standards and codes.

Our field service teams are self-contained, mobile and available to deploy across the nation with minimum notice. Fully trained and insured, all field work is performed to the highest standards, and complete documentation and reporting of all services performed is provided to the client upon project completion.

Exo understands the critical importance of safety, quality, and adhering to specific project schedules – put our experts to work for you today!

Exo Field Service & Repair Services Offered:

- Weld defect detection & remediation
- Corrosion remediation
- Design & installation of structure strengthening programs
- Galvanizing & coatings remediation
- Anchor bolt remediation/replacement
- Installation of proper drainage or venting systems
- Grout removal
- Concrete foundation patching & remediation
- Fiberglass pole patching & remediation
- Concrete pole patching & remediation
- Wood pole remediation

ENSURING STRUCTURAL INTEGRITY
